

About Play'n GO

Play'nGo was created by business professionals that all played an active role in forming the Online Gaming Industry more than 14 years ago. In 1997 we developed the first gaming solution, acting as a sub contractor to one of today's competitors.

Ride the wave of experience

For more than 14 years we have developed core components and delivered bespoke solutions. In 2007 the first stand alone complete online gaming platform sold directly to an operator was delivered – ever since we have delivered Complete Solutions and cutting edge Core Components and Modules to a wide variety of customers... Play'n Go headquarter is in Sweden with development center in Hungary. We are licensed in UK, Malta and Alderney.

Thanks to the long experience earned having developed to the online gaming industry for more than a decade, our team always maintain the highest level in quality on everything we produce. We know of the pit falls to avoid and have learnt the hard way about potential "bottle-necks" that other developers might end up in. When we create our state-of-the-art solutions we combine our long experience with the latest available technology and thereby offering the best of 2 worlds – a system that in all aspects are truly modern & highly flexible, built in modular architecture and yet riding the wave of experience based on our legacy.

Easy integration made available

The modular architecture allows for easy integration of 3rd party products of any kind whether it's a specific game, a complete platform and/or a payment solution. Over the years we have integrated our system with several poker networks and most payment solutions available. As we work with pre-defined API's in both ways - integration of a PnG product to a customers existing gaming platform is made easy – in the same way integration of a 3rd party product to our own platform is straight forward.
