

## Back Office for Professionals

With a comprehensive suite of management tools our Gaming Administration Toolkit (GAT) provides you with all you need to control and manage your operation in real time. With a modern, easy and intuitive user interface you have access to key data and the support systems you need for a successful operation.

GAT is a product based on more than 14 years of experience from developing online gaming systems. It is a professional and high performing product tailored to make your business more profitable, increase efficiency & boost performance

## GAT – Unified View

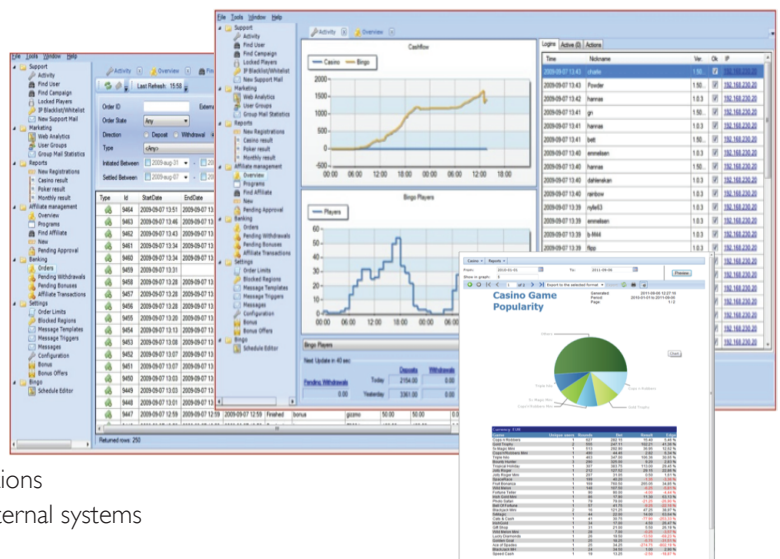

Any successful gaming operation needs a strong and steady back office. GAT allows you to control and actively manage your operation in real time. Make the most of the Play'n GO suite of games and manage games from any 3rd party supplier at the same time through one and the same Unified View.

GAT capably manages a heterogeneous operation based on components supplied by Play'n GO and/or from other vendors, granting you the independence to shop around for the very best applications and systems. Interoperability with your existing systems means you are not compelled to alter your entire back-office structure - GAT can be used as the main system as well as a sub system. It's your choice.

Built on open and modern technology GAT enables easy integration of third party gaming products. We have successfully integrated a wide range of Poker operations from Ogame, Ipkoker and Entraction network that all enjoy the Unified View and uses GAT as their main back office tool.

## Key features;

- Extensive customer support tools
- Marketing campaigns
- Loyalty programs
- Affiliate management
- Supervise seamless payment processing
- Reports and data mining
- Bonus handling
- Tournament management
- Game configurations
- Export of data to external products (Excel etc)
- Open architecture allows for easy custom integrations
